

Carl Sagan Says

- "These are some of the things Hydrogen atoms do, given 15 billion years of evolution"
- "We are, in the most profound sense, children of the Cosmos"
- "We are star stuff contemplating the stars"

This Class (Lecture 26):

Contact?

Next Class :

Review!

Research Papers are due on May 5th.

This paper must be 4 to 5 pages of single-spaced 12 point font, not including references.

Final Exam is May 7th at 1:30-4:30.

Outline

- Why have we not had ET visitors?
- What conclusions can we draw from this class?
- What are UFOs?
- Pseduoscience.
- No evidence!
- Final words.

May 3, 2004

Astronomy 230 Spring 2004

What are we left with?

- These are two distinct but still very significant claims
 - The Earth has been visited by ETs.
 - The Earth has not been visited by ETs.
- Neither of these statements has been validated.
- So, the only statement we can make is
 - We do not know whether or not the Earth has been visited by ETs.

May 3, 2004

Astronomy 230 Spring 2004

<http://www.cgl.uwaterloo.ca/~csk/washington/graphics/logos/validated.gif>

The ET Visitor Hypothesis

- So far no reliable evidence exists for ET visitation
- But, the idea that we have been visited and traces exist somewhere is a valid **THEORY**
 - Maybe improbable but still valid
- *Don't expect people to believe your theory unless it is substantiated with reliable evidence*

May 3, 2004

Astronomy 230 Spring 2004

UFOs

- What is a UFO?
- Can all/any of these sightings be traced to ETIs?
- Stands for **U**nidentified **F**lying **O**bject.
- Was introduced as neutral bureaucratese term to replace the emotionally charged term “flying saucer”
- Originally, the term UFO did not have anything to do with extraterrestrials.
- Scheme did not work, and now UFO has all of the connotations that “flying saucer” originally carried.

Close Encounters?

Scientific approach— you gotta classify

1. Nocturnal lights: bright lights
2. Daylight lights: usually cigar or disk-like shaped.
3. Radar-visual: those detected by radar
4. Close encounters of the 1st kind: visual sighting of an unidentified object.
5. Close encounters of the 2nd kind: visual sightings plus physical effects on animate or inanimate objects
6. Close encounters of the 3rd kind: sightings of occupants in or around a UFO.

Carl Jung

May 3, 2004

Astronomy 230 Spring 2004

We Need Hard Evidence?

- A probe or remains of a probe somewhere on our planet or in our solar system
- The remains of ET biological activity somewhere on our planet or in the solar system.
- ET clearly announce themselves.
- If you expect to have your scientific investigation received seriously, you have to follow simple logic and common sense
 - The rules for the scientific method are just logic and common sense

UFO Phenomenon

- Some argue that we have proof:
 - UFO sightings.
 - Strange historical accounts or grand technological accomplishments of humans in the past.
 - Alien abductions.
- This all falls into the realm of pseudoscience.
- There has never been any concrete evidence of extraterrestrials having anything to do with UFOs.
- UFOs could be so very many things. Why assume automatically that there is an otherworldly explanation? But those who want to believe will do so even despite evidence to the contrary.
- In this class, we think that "Extraordinary Claims Require Extraordinary Evidence" - Carl Sagan.

May 3, 2004

Astronomy 230 Spring 2004

Witness This

- In a court of law, testimony is used and it has to be judged for legitimacy
 - Bad testimony often gets judged as good and vice versa
- Science is not a court of law
 - We know that testimony can be flawed, so we can not rely on it as a reliable source of information
 - The mind can deceive or be deceived or it can relate observations accurately
 - We don't ever know which for sure

May 3, 2004

Astronomy 230 Spring 2004

Pictures

- Pictures are getting close to evidence...
 - What is in the picture?
 - It could be forged (photoshoped)
 - It could be a misprint
 - It could be real
 - We don't know.
- Even if we have a picture or a reliable sighting of, say, a space craft the most logical explanation is still that a human-made object was seen.
 - Occam's razor.
 - We know that governments work on advanced projects in secret.
 - Without evidence of ET life, this explanation is simplest.

Astronomy 230 Spring 2004 <http://home.tiscali.be/mathias.appelmans/alien.jpg>

Ancient ET Visits?

- There are a number of ancient images and artifacts that have been associated with UFOs by modern "UFO researchers".
- Let's look at some of those. They're easy to find on the web— too easy.
- If we can't really trust modern isolated photographs...maybe renaissance paintings?

Astronomy 230 Spring 2004

Amazing or Ordinary?

- We have no reliable evidence that ET's helped to build the pyramids or any other amazing artifacts.
- We do have plenty of evidence of humans doing extraordinary things when working in concert
 - What is the most logical explanation?

May 3, 2004

Astronomy 230 Spring 2004

<http://homepage.ntlworld.com/jackaram/>
<http://www.aegypten-online.de/images/giza/pyramid.jpg>

Pseudoscience

- Although there are numerous examples of interesting paintings, drawings from the middle ages or ancient times can not sensibly be used as evidence of UFO visitation!
- The most logical explanation is that people saw something in the sky (a comet or meteorite or clouds) and let their imaginations run wild.
- Strange sights does not mean aliens.

May 3, 2004

Astronomy 230 Spring 2004

Give Me Real Evidence!

- Evidence:
 - A piece of a probe or spaceship
 - Some trace which can be uniquely linked to an ET probe
 - Biological material.
 - A reliable, logical calculation
- That is the same we require of ANY scientific investigation

<http://www.alien-ufo.com/images/ufo/miscufo4.jpg>

May 3, 2004

Astronomy 230 Spring 2004

Propulsion Detection

- Only if interstellar techniques become really easy will visits be possible.
- We would probably see them coming.
- Nuclear fusion and antimatter propulsion would produce copious gamma rays– easily detected.
- If a spacecraft decelerated from c within 1 AU of the Earth with mass $>$ few tens of grams would be detected.

May 3, 2004

Astronomy 230 Spring 2004

<http://www.yougottareadthis.com/img/51-on-ufo.jpg>

Condon Report

- There were numerous government studies on the topic of UFOs– some very biased.
- The main one of importance was the only scientific study of UFOs called the Condon report (1969).
- “The report concludes that there is no evidence to justify a belief that extraterrestrial visitors have penetrated our skies and not enough evidence to warrant any further scientific investigation.”

May 3, 2004

Astronomy 230 Spring 2004

Some Real Facts

- The fact that the majority of humans live in cities with very little familiarity with the sky goes a long way to explaining most UFO sightings.
- How many of you have ever seen ball lightning?
- The planet Venus is mistaken for a UFO all the time because it is very bright, is often viewed low to the horizon and therefore experiences atmospheric scintillation which makes its color change rapidly.
- Have you ever seen a stealth fighter or bomber in flight?
- What about swamp gas?
- Insect swarms flying through electric fields?
- All of these things are in the sky and most people have no idea what they are looking at when they see them.

May 3, 2004

Astronomy 230 Spring 2004

Alien Abductions

- Alien abduction stories bare a resemblance to post traumatic stress disorder.
- People experience something horrible in their lives and their brains suppress the memories.
- The memories remanifest in dream-like states where the mind is highly susceptible to confabulation and fantasy.
- The stories often involve elements that sound like a condition called *sleep paralysis*.
- When you are in REM sleep and are dreaming your body paralyzes the major voluntary muscles so that you cannot injure yourself while you dream.
- Sometimes we can fall into dream states before we have become completely unconscious. Our bodies become paralyzed and we can even dream in the state, but yet we are also partially awake. It's called *waking dreams* it's a real and studied phenomenon.

May 3, 2004

Astronomy 230 Spring 2004

Your Call

- We have no reliable evidence to support actual ET contact.
- We have evidence that people historically make up stories about things they imagine to be linked to a light in the sky
 - So, what is the most logical explanation?

May 3, 2004

Astronomy 230 Spring 2004

Open Your Mind?

- Yes, as we have justified, it is possible that an ETI civilization has visited the Earth at some point in its history
- It is a legitimate scientific question to investigate this
- **We need legitimate scientific evidence in order to believe this theory**

May 3, 2004

Astronomy 230 Spring 2004

Bottom-line

- We have probably not been visited by aliens; there is no evidence.
- To me, alien reports are images of human psyche.
- But, our Drake equation estimate suggest that extraterrestrial life is common.
- So the Fermi Paradox: “Where are they?”
- I would argue that we keep trying to figure out the Universe, look at the concept of extraterrestrial life with a critical eye, fill in our gaps of knowledge, and the search is on.
