Music: Million Miles Away from Home – Dune

Jan 21, 2009

Astronomy 330

Outline

- Some more details on the presentations.
- What is the size scale of space?
- Can it fit in our little heads?

Jan 21, 2009

Astronomy 330

Oral Presentation

- Most students in this class come with a topic that is of interest to them.
- Student will build this interest into a research project. Logically, if one student is interested then other students will likely be interested in the topic too.
- This forum provides the opportunity to investigate issues that may not be explored or not explored in depth during class.

Jan 20, 2009

Astronomy 330 Spring 2008

<http://www.public.asu.edu/~ajlb/>

Oral Presentation Questions

1. How relevant is the topic to the search for extraterrestrial life or this class?
2. How interesting is the topic for the general class audience?
3. Rate the extent of the speakers knowledge on the topic?
4. Rate the quality of the overall presentation?
5. Does the research use enough solid scientific basis?

These questions are rated 1-10 out of 10 scale.

Astronomy 330 Spring 2008

Presentation Examples

- Life without a planet
- Faces and pyramids on Mars
- Aliens in South Park: Satire, Silly, or Scientific
- Supernovae: Adding Heavy Elements to the Mix
- Panspermia: Life from the Stars
- Human Colonization of other Planets/Asteroids
- Terraforming Mars
- How to get to Mars
- Self-Replicating Space Probes: Explore the Galaxy on the Cheap.

Astronomy 330 Spring 2008

Space is Big!

"Space is big. Really big. You just won't believe how vastly hugely mind-bogglingly big it is. I mean, you may think it's a long way down the road to the chemist, but that's just peanuts to space..."

To be fair though, when confronted by the sheer enormity of the distances between the stars, better minds than the one responsible for the Guide's introduction have faltered.

The simple truth is that interstellar distances will not fit into the human imagination."

--Douglas Adams

The Hitchhiker's Guide to the Galaxy

Jan 21, 2009

Astronomy 330

One of

We are:

- 1 planet out of 8×10^{17} in our solar system.
- 1 stellar system of 100 billion stars in our Milky Way

Jan 21, 2009

We'll talk about Pluto next lecture.

Perspective of Scale

Images from Voyager (launched in 1974) at 4 billion miles out. Moving at 100 times faster than a speeding bullet. And just recently made it into interstellar space.

Jan 21, 2009

Astronomy 330

Interstellar Travel

Don't forget that the Voyager spacecraft are about the fastest vehicles made by mankind. Even so, Voyager would take over 100,000 years to reach some of the closest star systems.

Jan 21, 2009

Astronomy 330

What's the Fastest Way?

- Let's look into the constant speeder— light!
- We'll be talking about it a lot.
- Fastest thing out there.
- Nothing faster allowed—we'll talk more about this later.

Jan 21, 2009

Astronomy 330

What is Light?

- Visible light is only a tiny portion of the full electromagnetic spectrum
- Light comes in many colors that you can not see! The color x-ray or color radio or color microwave.
- Divisions between regions are really only from biology or technologies.

The atmosphere absorbs some wavelengths and not others

Jan 21, 2009

Astronomy 330

Distances

How far is it to Chicago?

- Around 135 miles
- Or 217 km
- Or 712800 feet
- Or 8.7×10^{10} microns
- Or 285120 paces
- Or 2 hours at car speed
- Or 1 The Matrix DVD units at car speed
- Or 0.7 ms at light speed**

Jan 21, 2009

Astronomy 330

A Light Year

The **light-year**

- Distance that light travels in one year
- Speed of light: roughly 3.00×10^5 km/sec
- 3.16×10^{17} seconds in one year

so 1 light year = $(3.00 \times 10^5 \text{ km/sec}) \times (3.16 \times 10^7 \text{ sec}) = 9.42 \times 10^{12} \text{ km}$

- Nearest star (Proxima Centauri) is about 4.2 light years away.
- Analogous to saying: Chicago is about 2 hours away.

Jan 21, 2009

Astronomy 330

Question

- I want to send a signal to the nearby star Alpha-Centauri (there might be ETI), which is 4.2 light years away.
- I want to communicate quickly.
- So what wavelength of light do I use? Radio? X-rays?
- How long will it take to reach Alpha-Centauri?

Jan 21, 2009

Astronomy 330

First Contact?

- It will take 8.4 years to send out a radio message and get a response.
- It will take 100,000 years to travel on a Voyager-like spacecraft.
- For stars in the sword of Orion, it would take 3000 years.

Jan 21, 2009

Astronomy 330

Other Distances

- 1 light year is 9.42×10^{12} km
- AU: the distance from the Sun to the Earth = 149,570,000 km = 1.58×10^{-5} light years
- pc: the distance away that a star would have a parallax of 1 arcsec, so 1 pc = 3.086×10^{13} km = 3.26 light years

Jan 21, 2009

Astronomy 330

Size Scales

To put astronomical scales into a reference, imagine a model of our Solar System.

Jan 21, 2009

We'll talk about Pluto next lecture.

Scale it:

The Most Math You'll Do in This Class

In groups:

Assume the Sun is the size of a softball (diameter = 4 inches).

- 1) Calculate the distance from the softball to the "Earth". Then show that distance to me.
- 2) What would be the distance to the Moon?
- 3) What is the distance to Proxima Centauri (4.2 light years away)?

Sun's diameter = 1,391,900 km

distance from Earth to Sun (1 AU) = 149,570,000 km

distance from Earth to Moon = 385,000 km

1 km = 1000 meter = 3279 ft = 0.621 miles 1 mile = 5280 feet

1 light year = 9.46×10^{12} km = 5.87×10^{12} miles

Note: A million miles away from home is actually quite close!
